

## Step 1: Complete risk analysis and select hazard

---

Building upon your feasibility study results (see [chapter 1. Commit to FbF and assess feasibility](#)), complete your analysis of the risk analysis. For a thorough understanding of risk, extensive analysis of the impact of past extreme events as well as vulnerability and exposure data is required. Once your analysis of risks and past impact is completed, it should become clear which hazard should take priority for FbF in the country.

For more information on risk analysis see [chapter 4.1 Set the trigger](#) (particularly steps 1-5). [Chapter 4.2 Select early actions](#) provides guidance on how to collect data on past impacts.
